

Remsoft Training Workshops

Build **Smarter Faster Better** Models!

"A few days in one of Andrew's training workshops have saved me weeks of valuable time. THANKS!"

Remsoft training can save hours of your valuable time – it is a fast track way to effectively apply the Remsoft Technology.

Remsoft realizes that there are different types of training courses and forums that work best for our varied user community. This is why we offer an introductory course, a hands-on modeling workshop, and custom courses to meet YOUR training needs. These sessions can be delivered privately or through an open course which lets you join other users* in training, giving you a more flexible and economical option.

Introduction to Woodstock/Working with Woodstock (Two days)

The introductory two-day course is for beginners and intermediate users of the Remsoft Spatial Planning System. It is a comprehensive introduction to using the system and will give you the skills you need to build and run models effectively.

Modeling Workshop (One day)

A one-day modeling workshop will follow all open Working with Woodstock sessions. This hands-on modeling workshop will examine everything from new features to the most sophisticated modeling techniques. This class may be booked on its own, or in conjunction with Working with Woodstock.

On-site Workshop – your course your way!

Open course timing doesn't work for you? Have multiple trainees? Specific training needs? A Remsoft expert trainer is available to spend a few days with you at your location, our Remsoft office, or even online if you prefer. One of our trainers will deliver instruction to meet the specific needs of your organization. These intense, targeted workshops are an investment that will save you time and money!

* Open courses are limited to 12 attendees and are always led by one of Remsoft's expert trainers.
